Arihant Jain

SOFTWARE ENGINEER | BACKEND & AUTOMATION

Gurugram, Haryana | 8077584095 | arihant.jain.cardinal@gmail.com | Portfolio | LinkedIn | LeetCode | GitHub

PROFESSIONAL SUMMARY

Backend-leaning software engineer with 1.5+ years of experience building full-stack features, automating clunky manual workflows, and shipping cloud-deployed services. Over the past year at Carelon, I've built assessment-platform features used by 30,000+ people and automated a workflow that helped clear a backlog of 350,000+ pending medical claims. Comfortable working across Java, Python, TypeScript, and AWS, with a solid grounding in data structures, algorithms, and system design.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, C++

Backend & Data: Spring Boot, Node.js, Express.js, REST APIs, Microservices, Kafka, MySQL, Oracle, MongoDB

Cloud & Engineering: AWS ECS, Docker, Jenkins, CI/CD, Git, GitHub, Bitbucket, JUnit, TestNG, Debugging, Performance Optimization

Frontend & AI: Angular, React, Next.js, Playwright, MediaPipe, Generative AI SaaS, PDF RAG Pipelines

Foundations: Data Structures & Algorithms, Object-Oriented Programming, System Design, HLD, LLD

EXPERIENCE

Associate Software Engineer | Carelon Global Solutions

Gurugram, India | Sep 2024 - Present

- Built a Python + Playwright workflow that automatically locates FileNet documents, cutting manual document lookup for operations teams and helping clear a backlog of 350K+ pending medical claims.
- Build and maintain AEGIS, an internal assessment platform with 30K+ active users — shipped end-to-end frontend and backend features including MediaPipe-based video proctoring, dashboards, Okta SSO, and role-based access control.
- Cut release cycle time by 30% and page-load time by 50% by containerizing microservices, automating Jenkins-to-AWS-ECS deployments, and tracking down Angular and API-integration bugs.
- Automated PHI verification and document-attachment decisions for 100K+ medical claims — saving ~3,200+ hours of manual review effort — by building an OCR- and keyword-based detection bot.

Software Development Engineer Intern | Ready Motive

Gurugram, India | Jul 2022 - Dec 2022

- Built Node.js and Express REST APIs to stream ESP32 sensor data over MQTT with sub-second latency, plus C++ firmware for on-device processing.
- Improved SEO visibility by 20% by building responsive, user-focused web pages with Next.js, JavaScript, HTML, and CSS.

FEATURED PROJECT

Distributed File Storage System

| Java 21, Spring Boot, PostgreSQL, Flyway, Oracle Object Storage

GitHub Repo | Live Demo

- Designed and built a distributed file storage service from scratch to go deep on distributed-systems fundamentals — chunked, content-addressed storage with immutable versioned manifests and configurable, rack-aware replica placement.
- Implemented hybrid authentication (short-lived access tokens plus secure refresh cookies), per-user file namespaces, and admin-gated background workers for replica repair, under-replication checks, and retention-based garbage collection.
- Built a pluggable storage layer supporting both local filesystem and Oracle Object Storage backends, with transactional metadata persistence via Flyway and full API docs via Swagger/OpenAPI.

EDUCATION & CREDENTIALS

Chandigarh University, Ajitgarh, India | B.E. in Computer Science & Engineering | Aug 2020 - May 2024 | CGPA: 8.04/10

Oracle Cloud Infrastructure 2025 Certified Developer Professional | 350+ LeetCode problems solved | Generative AI SaaS coursework (Coursera)
